Discord Server Documentation — Personal Server Setup & Moderation Project

Server Invite: https://discord.gg/6Wjsx2FWs

Role: Server Owner

Period: 2025 – Present

1. Server Overview

This Discord server was independently created by me as a technical learning and practice environment.

The primary goal of the server is not community growth or engagement, but to gain hands-on experience with:

- Discord server setup

- Role and permission configuration

- Bot integration and configuration

- AutoMod and moderation system setup

The server functions as a sandbox environment for testing and learning Discord infrastructure.

2. Purpose of the Server

The server was intentionally created without onboarding members in order to:

- Focus exclusively on technical setup

- Safely test permissions and moderation tools

- Experiment with bot configurations without affecting real users

- Understand Discord's moderation systems in depth

No public engagement or member growth strategies were implemented.

3. My Role & Responsibilities

As the server owner, I was responsible for the complete technical setup and configuration of the server.

Core Responsibilities

- Created the server structure from scratch

- Designed channel categories and layouts

- Configured roles and permissions

- Set up AutoMod rules and safety features

- Integrated and configured moderation and utility bots

- Tested moderation actions and bot responses

4. Server Setup & Configuration

Server Structure

- Logical channel categorization

- Clear separation between admin, moderation, and member areas

- Test channels for bot and AutoMod behavior

Roles & Permissions

- Owner, admin, and moderator roles

- Permission hierarchy designed to prevent abuse

- Controlled access to sensitive channels
